

AIMS English LMS — Cloudflare Pages Deployment

Project Structure

```
aims-lms/
├── index.html           ← Login / Signup
├── student-dashboard.html ← Student portal
├── admin-dashboard.html ← Admin panel
├── styles/
│   ├── main.css
│   ├── auth.css
│   ├── dashboard.css
│   └── admin.css
└── js/
    ├── firebase-config.js ← ⚠️ CONFIGURE THIS FIRST
    ├── auth.js
    ├── student-dashboard.js
    └── admin-dashboard.js
```

Step 1: Firebase Setup (Free Spark Plan)

1. Go to <https://console.firebase.google.com>
2. **Create Project** → Name: `aims-lms` → Continue
3. **Authentication** → Sign-in method → Enable **Email/Password**
4. **Firestore Database** → Create database → Start in **production mode**
5. **Project Settings** → General → Your apps → Add Web App → Copy config
6. Open `js/firebase-config.js` → Replace `FIREBASE_CONFIG` values

Firestore Security Rules

Go to Firestore → Rules → Paste this:

```
rules_version = '2';
service cloud.firestore {
  match /databases/{database}/documents {
```

```

match /users/{userId} {
  allow read: if request.auth != null && (
    request.auth.uid == userId ||
    get(/databases/{database}/documents/users/{request.auth.uid}).data.role
  );
  allow write: if request.auth != null && (
    request.auth.uid == userId ||
    get(/databases/{database}/documents/users/{request.auth.uid}).data.role
  );
  match /payments/{payId} {
    allow read, write: if request.auth != null && (
      request.auth.uid == userId ||
      get(/databases/{database}/documents/users/{request.auth.uid}).data.ro
    );
  }
}
match /notifications/{notifId} {
  allow read: if request.auth != null && (
    resource.data.targetType == 'all' ||
    resource.data.targetUserId == request.auth.uid ||
    get(/databases/{database}/documents/users/{request.auth.uid}).data.role
  );
  allow write: if request.auth != null &&
    get(/databases/{database}/documents/users/{request.auth.uid}).data.role
  allow delete: if request.auth != null &&
    get(/databases/{database}/documents/users/{request.auth.uid}).data.role
  }
}
}

```

Step 2: Create First Admin Account

After deploying:

1. Sign up normally on the LMS
 2. Go to Firebase Console → Firestore → users → find your document
 3. Change `role` from `student` to `admin`
 4. Change `status` from `pending` to `active`
 5. Now log in — you'll be redirected to admin dashboard
-

Step 3: Deploy to Cloudflare Pages

Option A: GitHub + Cloudflare Pages (Recommended)

1. Push this folder to a GitHub repo
2. Go to <https://dash.cloudflare.com> → Pages → Create a project
3. Connect GitHub → Select repo
4. Build settings:
 - **Framework preset:** None
 - **Build command:** (leave empty)
 - **Build output directory:** / (or .)
5. Click **Save and Deploy**
6. Go to **Custom domains** → Add `student.aimsctg.online`
7. Update DNS: CNAME `student` → `your-project.pages.dev`

Option B: Direct Upload (No GitHub needed)

1. Zip the `aims-lms` folder
 2. Cloudflare Pages → Create project → **Direct upload**
 3. Upload the zip
 4. Set custom domain: `student.aimsctg.online`
-

Step 4: Firebase Auth Domain

Add your domain to Firebase:

1. Firebase Console → Authentication → Settings → Authorized domains
 2. Add: `student.aimsctg.online`
 3. Add: `your-project.pages.dev`
-

Costs

Service	Cost
Cloudflare Pages	Free (unlimited requests)
Firebase Auth	Free (up to 10k/month)
Firestore	Free (1GB storage, 50k reads/day)
Custom domain	You already own it

Total: ₺0/month 🎉

Admin Quick Reference

Action	Where
Approve student	Students tab → Approve button
Update payment	Payments tab → Update Payment
Send mass notification	Notifications tab → Send Notification → All Students
Send to one student	Notifications → Individual → Select student
Suspend student	Students tab → Suspend
Edit student details	Students tab → Edit
